

Me Module

Current user identity endpoint — the first call your frontend makes on app load.

Base path: `/api/v1/me`

Endpoint

Method	Path	Description
GET	/api/v1/me	Get full identity for the logged-in user

Frontend usage: Call this once on app load to build the sidebar, set up permission checks, and configure branding colors. Store the permissions array in application state and use it to gate every UI element.

Response

```
{
  "success": true,
  "data": {
    "userId": "uuid",
    "username": "admin@firm.com",
    "fullName": "Rajesh Hamal",
    "email": "rajesh@apexlaw.com",
    "userType": "FIRM_USER",
    "roleId": "uuid",
    "roleName": "FIRM_ADMIN",
    "roleCode": "FIRM_ADMIN",

    "firmId": "uuid",
    "firmName": "Apex Law Associates",

  "REPORTS": ["ACCESS"],
  "AUDIT": ["VIEW"],
  "USER_MANAGEMENT": ["VIEW"]
}
}
```

Frontend Usage Example

```
// On app load
const me = await fetch('/api/v1/me').then(r => r.json());
const perms = me.data.permissions;

// Check if user can access a module
const canAccessDocumentMgmt = perms.includes("DOCUMENT_MANAGEMENT:ACCESS");

// Check for a specific action
const canCreateCase = perms.includes("CASE_MANAGEMENT:CREATE");

// Use brand colors in the UI
document.documentElement.style.setProperty(
  '--color-primary', me.data.brandColorPrimary
);
document.documentElement.style.setProperty(
  '--color-secondary', me.data.brandColorSecondary
);
```
