Dashboards

Case Dashboard & Global Dashboard — what changed, API reference, curl collection & frontend integration guide

Base path: `/api/v1` · **Server port:** `6969` (dev) · **Auth:** Bearer JWT

Audience: backend developers, frontend developers

Scope: the new dashboard feature set — Case Dashboard, Case Assignments, Global Dashboard

Date: 2026-08-19

1 • What Changed

This is the complete list of backend changes the frontend needs to know about. The **new feature** is the dashboard set — two dashboards plus the case-assignment endpoints that power the case dashboard's role filter. On top of that, one field was removed from employee CRUD and several bugs were fixed that change API behaviour.

#	Change	Type	Frontend impact
1	Case Dashboard — <code>GET /api/v1/firm/dashboard</code>	New feature	One call replaces several list queries; role-filtered server-side
2	Case Assignments — <code>POST/GET/DELETE /api/v1/firm/matters/{matterNumber}/assignments</code>	New feature	Assign/revoke team members; drives the advocate role filter
3	Global Dashboard — <code>GET /api/v1/modules/dashboard</code>	New feature	Site-wide cross-module stats; SUPER_ADMIN vs FIRM_ADMIN scoping
4	Department removed from employee CRUD	Removal	Stop sending <code>departmentId</code> in create/update employee
5	Bug fix: FIRM_ADMIN role now honoured on dashboards	Fix	FIRM_ADMIN now sees <i>all</i> firm matters (previously an empty dashboard)
6	Bug fix: no-hearing matters no longer crash the dashboard	Fix	<code>daysSinceLastHearing</code> is now <code>null</code> when there is no hearing (not a 500)
7	Bug fix: stale flag is consistent	Fix	<code>stale: true</code> also for matters that have never had a hearing

Honest scope check

The **new feature work** is items 1–3 (the two dashboards + case assignments). Items 4–7 are changes made in the same session that the frontend must also account for — item 4 is a field removal, items 5–7 change response values. There were no other API changes.

2 • Case Dashboard

`GET` `/api/v1/firm/dashboard`

Role-filtered case overview for a single firm. **One call** returns everything the dashboard screen needs.

Role	What they see
FIRM_ADMIN	All firm matters + all of today's events + full positioning + stale list
ADVOCATE / PARALEGAL	Only matters they are assigned to (via Case Assignments) + only their own events today
SUPER_ADMIN / CLIENT	403 — not allowed

Response (envelope: `{ "success", "responseCode", "message", "data" }` **)**

```
{
  "data": {
    "stats": {
      "totalMatters": 45, "activeMatters": 32, "dormantMatters": 8,
      "closedMatters": 5, "todayEventsCount": 6, "staleCount": 12
    },
    "todayEvents": [
      {
        "eventId": "...", "ourCourtCaseRef": "APX-MAT-2026-00001-D1",
        "matterNumber": "APX-MAT-2026-00001", "matterTitle": "Contract dispute - ACME vs Beta",
        "eventType": "PESHI", "scheduledDate": "2083-05-15", "scheduledTime": "10:30:00",
        "endTime": "11:00:00", "status": "SCHEDULED",
        "courtRoom": "Room 3", "judgeName": "Hon. Judge X",
        "attendingAdvocateId": "...", "attendingAdvocateName": "Ram Shrestha"
      }
    ],
    "casePositioning": [
      {
        "matterId": "...", "matterNumber": "APX-MAT-2026-00001", "matterTitle": "...",
        "matterType": "LITIGATION", "matterStatus": "ACTIVE",
        "courtCaseId": "...", "ourCourtCaseRef": "APX-MAT-2026-00001-D1",
        "courtName": "Kathmandu District Court", "stage": "FIRST_HEARING", "caseStatus": "ACTIVE",
        "advocateId": "...",
        "lastHearingDate": "2083-04-29", "lastHearingType": "PESHI",
        "lastHearingStatus": "HELD", "lastHearingOutcome": "Adjourned - next date given",
        "nextEventDate": "2083-05-15", "nextEventType": "PESHI",
        "nextEventCourtRoom": "Room 3", "nextEventJudge": "Hon. Judge X",
        "totalEvents": 4, "daysSinceLastHearing": 18, "stale": false
      }
    ],
    "staleCases": [ /* subset of casePositioning where stale == true */ ]
  }
}
```

Frontend: `daysSinceLastHearing` is an **Integer, nullable**. It is `null` when a matter has never had a hearing (do not render "0 days").
`stale` is `true` when the last hearing is 90+ days ago *or* there has never been a hearing.

Curl

```
curl -s "http://localhost:6969/api/v1/firm/dashboard" \
-H "Authorization: Bearer $TOKEN"
```

3 • Case Assignments

Assign employees (advocates, paralegals, juniors, supervisors) to matters. Multiple people can be assigned to one matter with different roles. These assignments are what the case dashboard's role filter uses — an ADVOCATE/PARALEGAL sees exactly the matters they are assigned to.

```
POST /api/v1/firm/matters/{matterNumber}/assignments
```

Assign an employee to a matter. The user must be a firm employee (`FIRM_USER`); CLIENT accounts are rejected.

```
curl -s -X POST "http://localhost:6969/api/v1/firm/matters/APX-MAT-2026-00001/assignments" \
-H "Authorization: Bearer $TOKEN" -H "Content-Type: application/json" \
-d '{"data":{"userId":"<employee-uuid>","assignmentRole":"PRIMARY_ADVOCATE"}}'
```

assignmentRole enum:

Value	Meaning
-------	---------

PRIMARY_ADVOCATE	Lead counsel on the matter
CO_ADVOCATE	Secondary counsel
PARALEGAL	Paralegal support
JUNIOR	Junior associate
SUPERVISOR	Supervising partner

GET

/api/v1/firm/matters/{matterNumber}/assignments

List everyone assigned to a matter.

```
curl -s "http://localhost:6969/api/v1/firm/matters/APX-MAT-2026-00001/assignments" \
-H "Authorization: Bearer $TOKEN"
# data: [ { "id", "matterId", "matterNumber", "matterTitle",
#           "userId", "userName", "assignmentRole", "createdAt" } ]
```

DELETE

/api/v1/firm/matters/{matterNumber}/assignments/{userId}

Revoke all assignments for that user on the matter.

```
curl -s -X DELETE "http://localhost:6969/api/v1/firm/matters/APX-MAT-2026-00001/assignments/<userId>" \
-H "Authorization: Bearer $TOKEN"
```

Note: matter creation is unchanged — `POST /api/v1/firm/matters` (see the curl collection). Create the matter first, then assign its team.

4 • Global Dashboard

GET

/api/v1/modules/dashboard

Site-wide, cross-module stats. Scope depends on the caller's role:

Section	FIRM_ADMIN (firm-scoped)	SUPER_ADMIN (all firms)
userStats	Users of own firm	All users, all firms
firmStats	Own firm only (<code>totalFirms: 1</code>)	All firms
caseStats	Own firm's matters	All matters
scraperStats	Platform-wide scraper totals	
recentActivity	Audit log for own firm	All audit log

Response

```
{
  "data": {
    "userStats": {
      "totalUsers": 12, "activeUsers": 10, "inactiveUsers": 2,
      "totalAdvocates": 5, "totalParalegals": 3, "totalClients": 2, "totalFirmAdmins": 1
    },
    "firmStats": { "totalFirms": 1, "activeFirms": 1, "suspendedFirms": 0 },
    "caseStats": {
      "totalMatters": 45, "activeMatters": 32, "closedMatters": 5,
      "staleMatters": 12, "todayEvents": 6
    },
    "scraperStats": {
      "courtsTracked": 2, "totalDailyHearings": 14280, "totalWeeklyHearings": 8605,
      "totalMatches": 23, "lastScrapeTime": "2026-08-18T00:00:00"
    },
    "recentActivity": [
      { "summary": "Matter created: APX-MAT-2026-00001", "action": "MATTER_CREATED",
        "entityType": "MATTER", "userName": "Ram Shrestha", "createdAt": "..." }
    ]
  }
}
```

Curl

```
# FIRM_ADMIN (own firm) or SUPER_ADMIN (all firms) – same endpoint, scope is automatic
curl -s "http://localhost:6969/api/v1/modules/dashboard" \
-H "Authorization: Bearer $TOKEN"
```

5 • Department Removed From Employee CRUD

The employee create/update endpoints no longer accept a `departmentId` field, and the employee response no longer contains a `department` object. The whole Department feature was dead code and has been deleted.

Frontend: remove `departmentId` from any employee create/update form and drop the department column from employee tables. Sending `departmentId` today is ignored (the DTO no longer maps it); it will not error, but it does nothing.

6 • Frontend Integration Guide

6.1 Authentication flow (unchanged, but required)

Both dashboards need a JWT. Login returns a `status` that tells the UI what to do next:

```
POST /api/v1/auth/login
{ "data": { "lawFirmCode": "APEX-LAW", "username": "...", "password": "..." } }
```

Response status:

SUCCESS	-> store accessToken, go to app
PASSWORD_CHANGE_REQUIRED	-> show change-password screen, use passwordChangeToken
MFA_SETUP_REQUIRED	-> show QR code (mfaQrCodeUri), then POST /auth/mfa/setup/confirm
MFA_REQUIRED	-> show 6-digit input, POST /auth/mfa/validate

(all with mfaToken + totpCode)

6.2 Case dashboard screen — one API call

```
GET /api/v1/firm/dashboard (Authorization: Bearer <token>)
```

Render the four sections directly from the response — the backend already applied the role filter, so the frontend does **not** filter anything:

- 1. **stats** — summary cards: total / active / dormant / closed matters, today's events, stale count.
- 2. **todayEvents** — today's hearings: time, court room, judge, attending advocate, case ref.
- 3. **casePositioning** — per-matter rows: current court, stage, last hearing date/outcome, next event, days since last hearing, stale flag.
- 4. **staleCases** — the subset of positioning where `stale == true` (90+ days).

6.3 Assigning a team (admin flow)

- 1. Create the matter: `POST /api/v1/firm/matters` (existing endpoint, unchanged).
- 2. Assign the team: `POST /api/v1/firm/matters/{matterNumber}/assignments` per employee + role.
- 3. To show who's on a matter: `GET /api/v1/firm/matters/{matterNumber}/assignments` .
- 4. To remove: `DELETE /api/v1/firm/matters/{matterNumber}/assignments/{userId}` .

6.4 Global dashboard screen (admin-only)

```
GET /api/v1/modules/dashboard (Authorization: Bearer <token>)
```

Only FIRM_ADMIN and SUPER_ADMIN may call it. Show the five sections: userStats (user counts by role), firmStats (firms), caseStats (matters + today's events + stale), scraperStats (court scraper totals), recentActivity (last 10 audit entries).

6.5 Role-based UI rules

Screen	Show to	Hidden from
Case Dashboard + Assignments	FIRM_ADMIN, ADVOCATE, PARALEGAL	SUPER_ADMIN, CLIENT
Global Dashboard	FIRM_ADMIN, SUPER_ADMIN	ADVOCATE, PARALEGAL, CLIENT

6.6 What changed vs. the old frontend behaviour

- **FIRM_ADMIN dashboard is no longer empty.** A bug meant the admin role was never detected, so admins saw only "assigned" matters (usually none). After the fix, FIRM_ADMIN sees *all* firm matters.
- **No more 500 on the dashboard.** A matter without a court case or without any hearing used to crash the whole dashboard; now it renders with `daysSinceLastHearing: null` .
- **Employee forms:** remove the department field.

7 • Full Curl Collection

Ready-to-run: `docs/dashboards-curl-collection.sh` (edit the CONFIG block at the top). Postman: `docs/dashboard.postman_collection.json` . The same commands are below for copy/paste.

Auth

```

BASE=http://localhost:6969

# 1. Login
curl -s -X POST "$BASE/api/v1/auth/login" -H "Content-Type: application/json" \
  -d '{"data":{"lawFirmCode":"APEX-LAW","username":"firmadmin","password":"pass"}}'

# 2. If PASSWORD_CHANGE_REQUIRED
curl -s -X POST "$BASE/api/v1/auth/change-password" -H "Content-Type: application/json" \
  -d '{"data":{"passwordChangeToken":"<pct>","newPassword":"NewPass123","confirmPassword":"NewPass123"}}'

# 3. If MFA_REQUIRED
curl -s -X POST "$BASE/api/v1/auth/mfa/validate" -H "Content-Type: application/json" \
  -d '{"data":{"mfaToken":"<mfaToken>","totpCode":"123456"}}'

TOKEN="<accessToken>"
AUTH="Authorization: Bearer $TOKEN"

```

Case Dashboard

```

# Role-filtered (FIRM_ADMIN = all, ADVOCATE/PARALEGAL = assigned only)
curl -s "$BASE/api/v1/firm/dashboard" -H "$AUTH"

# Create a matter (feeds the dashboard)
curl -s -X POST "$BASE/api/v1/firm/matters" -H "$AUTH" -H "Content-Type: application/json" \
  -d '{"data":{"matterType":"LITIGATION","title":"Contract dispute - ACME vs Beta","originatingCourtLevel":"DISTRICT","cour

# Assign an employee (PRIMARY_ADVOCATE)
curl -s -X POST "$BASE/api/v1/firm/matters/APX-MAT-2026-00001/assignments" \
  -H "$AUTH" -H "Content-Type: application/json" \
  -d '{"data":{"userId":"<employee-uuid>","assignmentRole":"PRIMARY_ADVOCATE"}}'

# List assignments
curl -s "$BASE/api/v1/firm/matters/APX-MAT-2026-00001/assignments" -H "$AUTH"

# Revoke assignment
curl -s -X DELETE "$BASE/api/v1/firm/matters/APX-MAT-2026-00001/assignments/<userId>" -H "$AUTH"

```

Global Dashboard

```

# FIRM_ADMIN = own firm | SUPER_ADMIN = all firms
curl -s "$BASE/api/v1/modules/dashboard" -H "$AUTH"

# Super admin login (separate endpoint, also MFA-gated)
curl -s -X POST "$BASE/api/v1/super-admin/login" -H "Content-Type: application/json" \
  -d '{"data":{"username":"superadmin","password":"pass"}}'

```

LAW ERP — Dashboards feature documentation · 2026-08-19 · Backend: `com.lawfirm.erp.modules.casemanagement` (dashboard/assignments) + `com.lawfirm.erp.modules.usermanagement` (global dashboard)
